

HOW TO PREPARE YOUR PROPERTY FOR THE CONSTRUCTION PROCESS:

YOU ARE PART OF THE CONSTRUCTION PROCESS

We understand that preparing for a major landscape transformation can feel overwhelming. This comprehensive guide will help you get your property ready for your construction team's arrival, ensuring a smooth and efficient process from day one. The prep work is one of the best ways for you to get involved in your transformation.

SITE ACCESS & SAFETY: YOUR TOP PRIORITY

Safety and accessibility are the cornerstones of a successful landscape project. Before construction begins, focus on these essential preparations:

- Provide clear access through gates and security systems
- Clear designated parking areas for construction crews
- Remove vehicles from the construction zone
- Create a secure area for pets away from work sites
- Plan alternative outdoor spaces for children's activities

Pro Tip: Consider how construction will impact your daily routine and plan accordingly. Simple adjustments like using a different entrance or relocating garbage bins can make a significant difference.

MATERIAL STAGING AREA

A well-organized staging area is crucial for efficient project execution. Our team requires dedicated space for:

- Hardscape and construction materials
- Bulk aggregate storage
- Equipment positioning
- Disposal bin placement

We'll collaborate with you to identify optimal locations that balance construction needs with your daily activities.

1. Valuable Items & Personal Property

Protect your investments by:

- Relocating portable outdoor furniture and decor
- Securing or protect valuable outdoor items
- Moving potted plants
- Identifying immovable items requiring special protection

2. Yard Cleanup

Prepare your space by:

- Removing all pet waste
- Consider relocating or donating plants that aren't part of the final design
- Clear debris from the construction area
- Securing items that could be affected by wind

TIMELINE EXPECTATIONS

We maintain high standards and always strive to hit our installation schedule targets. However, potential factors affect timelines:

- Weather conditions
- Material delivery schedules
- Required inspections
- Sub-Contractor availability
- Unforeseen site conditions
